

Primal Assessment – Use Cases

Flexible anatomy assessment tools for today's learning environments

Today's anatomy teaching and learning challenges call for flexible new options perfect for both remote and in-person instruction.

Here's how educators are using the array of Primal Assessment tools to improve student learning.

PRIMAL ASSESSMENT USE CASES

#1 Self-Assessment

- Facilitate self-evaluation, especially in flipped classrooms or other virtual learning set-ups, with Primal's Anatomy & Physiology tool
- Anatomy & Physiology's gold-standard A&P content, plus built-in self-assessment tools, equip students with a comprehensive understanding of the topics covered
- Helps identify gaps in knowledge whilst engaging students with quiz questions and case studies

#2 Monitored Assessment

- Create classes and assign guided learning tasks across groups of anatomical structures and regions with PALMS (perceptual and adaptive learning modules)
- Track and record student performance for your review

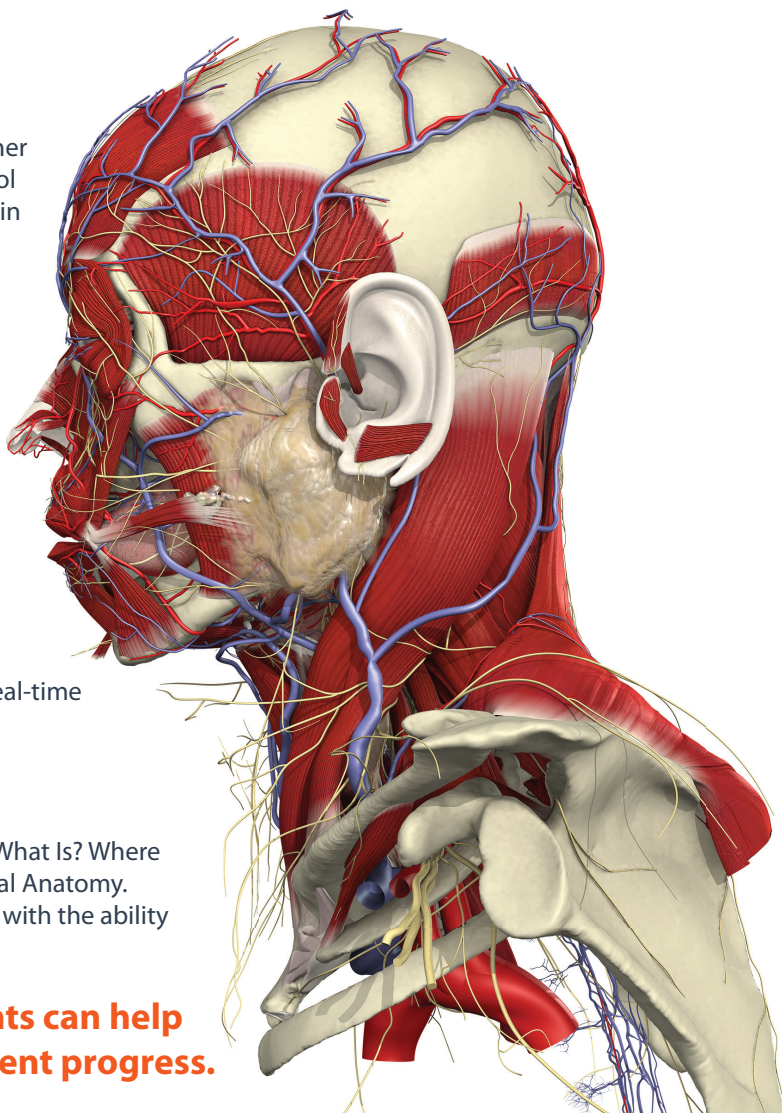

#3 Live Assessment

- Maintain engagement in online or face-to-face sessions with:
 - ~ Custom-labelled slides
 - ~ Spotter-style structure highlighting using Primal's Atlas or Real-time
 - ~ Highlighted structures in biomechanics animations using Primal's Functional Anatomy

#4 Spotter Assessment

- Prepare students for cadaver or spotter assessments with the "What Is? Where Is?" quiz module, for subscribers to Atlas, Real Time or Functional Anatomy.
- Use for informal assessment, or design formalized assessments with the ability to create custom labels and images.
